## Why Galvanized?

Galvanized trailers are hot dipped in liquid metal that doesn't rust. Galvanized trailers tend to be more durable and long-lasting due to the protective zinc coating. They can withstand exposure to various weather conditions, chemicals, and road debris without corroding like painted steel trailers. Galvanized trailers generally require less maintenance than painted trailers. The zinc coating acts as a barrier against corrosion and rust, preventing frame failure.

In summary, if you plan to use the trailer in harsh environments where corrosion is a significant concern, a galvanized steel trailer could be a better choice due to its superior corrosion resistance and durability.
